Hi,

I hope you're doing well.

I'm Prateek Dey, a backend engineer who enjoys transforming complex business problems into simple, reliable, and scalable software solutions. Alongside my professional experience, I've also had the opportunity to work with freelance clients, helping them turn ideas and operational challenges into practical software solutions.

A little about what I bring:

- Built backend platforms powering multiple enterprise B2B products.
- Designed and developed scalable REST APIs and backend services with a strong focus on reliability, security, and maintainability.
- Helped small businesses streamline their operations by building custom dashboards to manage orders, material deliveries, expenses, and business reporting from a single platform.
- Worked with local cafés to build digital dashboard solutions for managing and presenting their menus, making updates simpler and improving the overall customer experience.
- Actively exploring AI, LLMs, and developer tooling by researching, experimenting, and building practical solutions that improve software development workflows.
- Worked with Java, Python, Spring Boot, AWS, PostgreSQL, Redis, Docker, and modern backend technologies.
- Enjoy collaborating with clients and teammates to understand requirements and deliver solutions that are simple, scalable, and easy to maintain.

Beyond my day-to-day work, I'm an AI enthusiast who enjoys researching emerging technologies, experimenting with LLMs and AI-powered development tools, and finding practical ways to apply them to real-world engineering problems. I believe the best engineers learn continuously and embrace new technologies to build better software.

If my background aligns with what you're looking for, I'd be happy to connect and discuss how I can contribute to your team or project.

Thank you for your time and consideration.

Warm regards,
Prateek Dey
